How to Prevent and Treat Mold, Mildew and Dust

Clean your space regularly (once every 2 weeks), including windows, windowsills and air vents.

Dust with a duster or microfiber cleaning cloth.

Use a sanitizing cleaner to get rid of mold or mildew and prevent future growth.

Bleach for nonporous surfaces like showers and sinks

Vinegar solution for porous surfaces like wood or walls

Leave your bathroom fan running when you shower.

Don’t leave windows or balcony doors open for extended periods of time. If the AC is on, don’t leave doors or windows open.

Wipe away condensation on your windows.

Keep your thermostats between 68 degrees and 74 degrees.

Dry wet belongings (clothing, towels, rain jackets, umbrellas, footwear, etc.) before storing.

Take your trash to the nearest dumpster, and do not leave garbage on balconies or in the hallways.

Leave the washing machine lid open when not in use.
